- 1) Array; Fixnum; Float; FalseClass; NilClass
- 2) The way to insert an expression into a string, since it looks really elegant
- 3) I am not completely sure, but I am leaning towards yes, since it puts more focus on the customer
- 4) It helps when you are directly interfacing with the customer or another non-programmer, but it might slow down the process of writing tests and code
- 5) It allows for more detail, but it requires more definitions
